Hospital-grade security posture for sales and procurement review

Generated: 2026-06-10T03:40:31.504Z

Tenant Isolation

Every clinical record is scoped by `tenant_id`, `hospital_id`, and `branch_id`. UAT includes a Hospital A / Hospital B isolation fixture.

Role Access

Receptionist, doctor, nurse, lab technician, pharmacist, finance, hospital admin, CEO, CFO, and CIO have separate operating responsibilities.

Audit Trail

Clinical actions, billing actions, document generation, security checks, and tenant validation are logged through audit/event tables and reports.

Documents

Prescription, lab report, invoice, receipt, and verification flows support hospital branding, QR verification, and print/download use cases.

Operational Controls

Backups, disaster recovery documentation, role permission audit, tenant security audit, and performance certification are maintained as production readiness evidence.
